INTEGRATED SERVICE AND DECADE OF EXPERIENCE

Thanks to our service, integrated with all modern technologies and supported by decades of experience, our Customers secure the greatest advantages in product selection, depending on the specific needs of use.

Accurate product knowledge, accompanied by an extensive database at our disposal, enables us to provide technical and commercial assistance service, with the utmost timeliness and great professionalism.

 We have a broad technical background in model construction

OUR "SERVICE"

With direct service, after careful evaluation of cost/convenience in the construction of mechanical parts such as impellers, diffusers, bodies, cylinders, compressor valves, and whatnot, there is opportunity to intervene with the various stages:

-  Dimensional surveys of parts using modern digital technologies
-  Accurate preparation of technical drawings and production process cycles necessary for the production of blanks and finished products
-  Casting of parts and/or reconstruction by welding
-  Roughing and finishing machining
-  Any inspections if deemed necessary, with ultrasound, X-rays or liquid penetrants
-  Any equipment function tests whether or not attended by Classification Bodies (functional tests, hydrostatic tests, etc.)

SUPPLY OF SPARE PARTS

We specialize in supplying spare parts and can supply a wide range of parts, with very attractive prices and lead times especially for pumps and compressors.

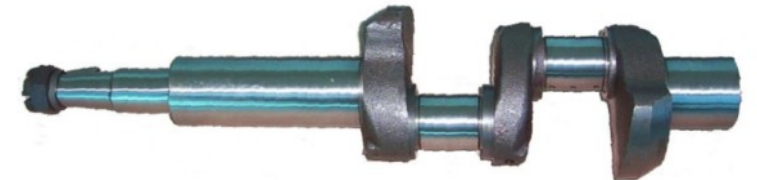

REVERSE ENGINEERING

- ⦿ Speed up the design process of a product
- ⦿ Cut down the time and cost of making a product
- ⦿ Analyze existing designs and increase their performance
- ⦿ Reproduce parts and products, correcting any defects
- ⦿ Produce the spare parts and parts, without buying them from an OEM, which could be time-consuming and costly
- ⦿ Produce the spare parts and parts that are out of production and therefore no longer available on the market
- ⦿ 3D reconstruction through Reverse Engineering, has a wide field of application, the main sectors in which it is used include, mechanical, aviation, automotive, civil and aerospace.
